SoftenUp™ Ceiling System

Product Detail

Application	Ceiling
Composition	100% polyester
Material	FilaSorb™
Recycled content	60% min
Weight	7.92kg/m ² +/- 10%
Thickness	12mm +/- 10%
Dimensions	600 x 600mm 600 x 1200mm

Sustainability

 Made from 60% min. recycled content	 Total VOC's less than 0.5 mg/m ³ (3 rd Party Verified)
 Generated using 40% solar energy	 Recyclable at end-of-life
 Declare Approved (3PV) for FilaSorb Printed Panels	 Indoor Advantage Gold Certified.

Technical Data

Fire test method	EN 13501-1: 2019
Classification	B-s1, d0
Water vapour sorption method	ASTM C1104-2019 (Procedure A Modified)
Water sorbed by weight	0.20% (results based on a 12mm thick panel)
Total VOC test method	SCS-EC10.3-2014 v4.0 meeting standard CDPH/EHLB Standard Method v.1.2-2017
Total VOC result	≤ 0.5mg/m ³
Colourfastness test method	ISO 105-B02
Rating	6-7

Guarantees

Lead time	4-6 weeks
Origin	United Kingdom
Warranty against defects	20 years*
Colourfastness warranty	20 years* <small>*conditions apply</small>

Acoustic Performance

Test method

AS ISO 354-2006: Acoustic - Measurement of sound absorption in a reverberation room

Installation method

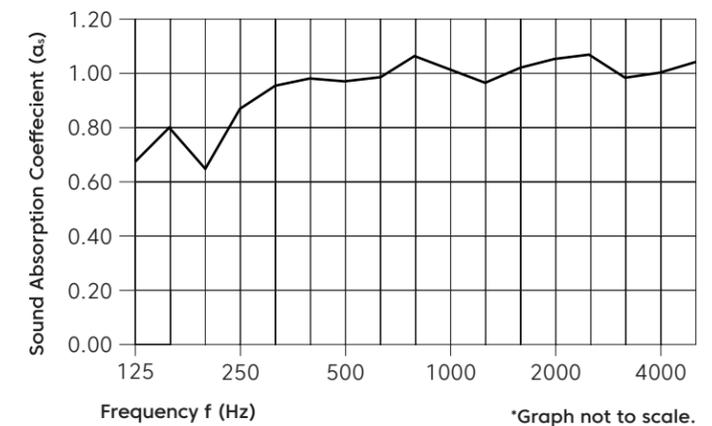

Type "E-400" Mounting, tested with 400mm air gap

Rating method

ISO 11654-1997: Acoustic – sound absorbers for use in buildings – rating of sound absorption

Test results

NRC 0.95 400mm air gap | aw 0.96, Class A

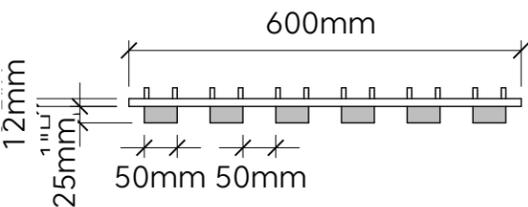

Frequency (Hz)	125	250	500	1000	2000	4000	NRC
12mm α _w	0.67	0.86	0.96	1.02	1.04	1.00	0.95

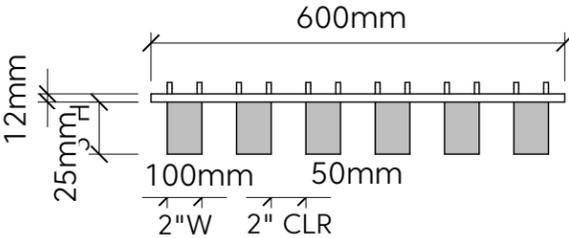

Performance Indices: **Noise Reduction Coefficient (NRC)** results represent the absorption coefficients measured at the one third octaves bands at 125, 250, 500, 1000, 2000 and 4000 Hz rounded to the nearest 0.05. Acoustic testing has been performed according to the methods mentioned above. Customisation of installation of the product could alter the results. **Sound Absorption Average (SAA)** indicates the absorption coefficient average for the twelve one-third octave bands ranging between 200 and 2500 Hz

Installation

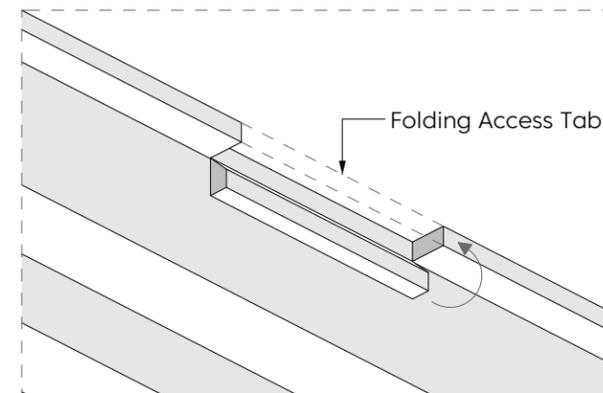

A. Suspension

B. Tolerance & Reveal

C. Ceiling Access

Notes

Suspension

The SoftenUp ceiling system is designed to connect to standard drop ceiling grid systems via a series of tabs integrated into the design. No additional hardware is required for standard installation. Seismic zones may require additional considerations. See note on seismic.

Life Safety

The panels can be trimmed on site, using a sharp utility knife, to accommodate any exit signage and/or wayfinding markings. Cut-outs must occur in 50mm gap between slats. All fixtures must be supported independent of tiles.

*Panels cut on-site may require additional support.

Clearance/Tolerance

When installed, SoftenUp tiles have a consistent 3mm reveal to account for any on-site tolerance concerns. Panels have a method for tile alignment integrated into the design.

*A continuous slat design is available - contact Acoufelt for further details.

MEP/FP

The panels can be trimmed on site, using a sharp utility knife, to accommodate any MEP/FP fixtures including but not limited to drop-in lighting and diffusers, recessed lighting, linear diffusers, concealed and exposed fire sprinklers, and A/V equipment. Please consult all local and municipal codes, as well as a licensed engineer, for full compliance requirements. Cut-outs must occur in 50mm gap between slats. All fixtures must be supported independent of tiles.

*Panels cut on-site may require additional support.

Ceiling Access

Panels with an integrated folding access tab are available upon request. These folding tabs allow for the removal of individual tiles to access ceiling systems.

Seismic

SoftenUp tiles can provide seismic compliance through a mechanical direct screw attachment through the panel to the grid system or an individual tile off to building structure. Please consult all local and municipal codes, as well as a licensed engineer, for full compliance requirements.
